EDUCATION

DIT University

Bachelor of Technology in Computer Science and Engineering

(2023 - 2027)

Dehradun, Uttarakhand

PROJECTS

AI Disaster Intelligence Platform | Python, FastAPI, PostgreSQL, React.js,

Jul 2025 - Aug 2025

- Built an end-to-end disaster intelligence web application with a FastAPI backend and React-based interactive map, delivering real-time risk analysis within ~100 ms per request from user interaction to visual output.
- Implemented a scalable backend system capable of handling 50–100 disaster records per session with consistent performance, supporting multiple sequential inference requests without service interruption.
- Created a click-based geospatial analysis workflow enabling users to assess any global location instantly, reducing manual data gathering effort by a significant margin compared to traditional location-based risk analysis.
- Engineered the system to be fully local and dependency-free (no paid APIs or external keys), allowing new users to clone, run, and visualize disaster markers within 5–10 minutes, making it suitable for demonstrations and government-scale prototyping.

Library Management System | Java Swing, Spring Boot, MySQL

Oct 2025 - Nov 2025

- Developed a full-stack Library Management System using Java Swing, Spring Boot, and MySQL, supporting management of ~10,000 book records with role-based access for administrators and users.
- Designed and implemented RESTful APIs for authentication, catalog search, and issue/return workflows, structuring the backend with a clean MVC architecture to ensure modularity and ease of maintenance.
- Optimized database interactions using Hibernate/JPA, indexing, pagination, and transactional handling, achieving approximately 40% faster search and retrieval performance by reducing redundant queries.
- Built an interactive desktop UI with Java Swing, incorporating form validation, real-time feedback, and robust error handling to ensure reliable end-to-end operations across multiple user workflows.

Car Rental Booking App | MERN Stack, React.js, ImageKit

Jul 2025 - Aug 2025

- Built and deployed a full-stack car rental platform serving 100,000+ users and 1,000+ vehicle listings, using a responsive React.js frontend and a scalable Node.js–MongoDB backend.
- Engineered secure, role-based JWT authentication and high-throughput REST APIs capable of handling thousands of real-time booking requests per day, including live availability validation.
- Enhanced admin fleet, pricing, and booking management tools that significantly reduced manual processing, approval delays, and booking errors, improving overall operational efficiency.

TECHNICAL SKILLS

Languages : JavaScript, TypeScript, Python, Java

Frameworks/Libraries : React.js, Next.js, Redux, Tailwind CSS,

Backend : Node.js, Express.js, Django, Django REST Framework

Databases : MongoDB, SQL, PostgreSQL

Cloud & Tools : Git, GitHub, Postman, Docker, AWS

Soft Skills : Leadership, Public Speaking, Event Management, Agile Development

ROLES AND RESPONSIBILITIES

- Contributed to 10+ community service and awareness initiatives, including cleanliness drives and social outreach programs, supporting 200+ beneficiaries through coordinated university-led volunteering efforts.
- Managed planning and execution of multiple technical and community events, mentoring and coordinating 50+ students, and improving team efficiency and event delivery through structured task delegation and leadership.
